

### Vanke Triple V Gallery

MOD's dramatic design for the Triple V Gallery has become an icon along the Dong Jiang Bay coastline. Designed as a permanent show gallery and tourist information center for Vanke, China's largest developer, the building's design evolved rationally from a careful analysis of key contextual and programmatic factors. The tourist center and the show gallery are oriented to separate pedestrian pathways and can be operated independently. Discussions are conducted in the lounge area. Tectonically, the building responds to the coastal setting and is finished in weather-sensitive Corten steel panels on its exterior and timber strips on the interior walls and ceiling.
